## Identifying and Supporting Trauma in Complex Cases of ASD

Date: January 6, 2021

Time: 2:30-4:00 PST

Location: <https://ubc.zoom.us/j/3067460658>  
passcode: 947146

Trauma rates in children with ASD may be underestimated due to the range of symptoms that potentiate the risk for maltreatment; thus, overshadowing of trauma symptoms is likely in this population (Stack & Lucyshyn, 2018). Using case studies, this seminar will provide an overview of trauma; how it can present in individuals with ASD; and a review of the literature.

### Learning Objectives:

1. Discuss how symptoms can present themselves in individuals with ASD and trauma;
2. Discuss applications of applied behaviour analysis (ABA) to trauma;
3. Discuss applications from Trauma-Focused Trauma-Focused Acceptance and Commitment Therapy
4. Discuss applications from Trauma-Focused Cognitive Behaviour Therapy
5. Discuss and apply how to integrate trauma-based approaches with an ABA- based intensive intervention program.

No registration is required. BACB CEUs will be available to people who attend the LIVE event. Details will be provided at the start of the colloquium.

**This event will be recorded and posted on the CIRCA website at a later date; see <https://circa.educ.ubc.ca/media> for past colloquia**

## Presenters

**Alexia Stack,**  
M.Ed., BCBA,  
Clinical Supervisor,  
A Block Above  
Behavioral  
Consulting

**Bobbi Hoadley,**  
M.Ed., BCBA, RCC,  
Practice Leader,  
Parley Services

**Andrea Schneider,**  
BCR, BCaBA, A Block  
Above Behavioral  
Consulting
